DETAILED ACTION

Specification

The application has not been checked to the extent necessary to determine the presence of all possible typographical and grammatical errors. Applicant's cooperation is requested in correcting any errors of which he/she may become aware in the application.

The Information Disclosure Statements filed 08/19/03 have been considered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 8, line 2, it is unclear what is meant by "picking up a signal arising in the quantizer". Clarification is required.

In claim 5, line 2, it is unclear what is meant by "fed back...with a specific factor".

It is unclear what that specific factor is referring to. Clarification is required.

In claim 5, line 2, the phrase "depending on how many...lies in the future" is confusing. Clarification is required.

Art Unit: 2819

Drawing Objections

The drawings are objected to under 37 CFR 1.83(b) because they are incomplete and they are insufficiently labeled. 37 CFR 1.83(b) reads as follows:

When the invention consists of an improvement on an old machine the drawing must when possible exhibit, in one or more views, the improved portion itself, disconnected from the old structure, and also in another view, so much only of the old structure as will suffice to show the connection of the invention therewith.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1,2,4,5,8,10,11 and 13 are rejected as being anticipated by Wiesbauer et al (US 6,496,128).

Wiesbauer et al teach in figure (1) an oversampling multi-stage sigma-delta analog-to-digital converter that includes inter alia a quantizer (10) used to digitize time-discrete analog input values x(z), wherein a quantization error in analog form is determined after each conversion of an input value, at combiners (7) and (18), and wherein the analog quantization error signal originated from the quantizer (10) is fed back to subsequent stage inputs and shifted to higher frequency ranges to facilitate filtering (See (16)).

Art Unit: 2819

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3,6,7,9 and 12 rejected under 35 U.S.C. 103(a) as being unpatentable over Wiesbauer et al (US 6,496,128) in view of Geen et al (US 4,839,650).

Regarding those claims, Wiesbauer et al teaches the essential features of the claimed invention as set forth above except for sample-and-hold circuits constituting a delay network that hold the error signal for further processing, a successive approximation technique, and a plurality of reference values that are compared to signal input values to generate an output signal. However, Geen et al (US 4,839,650) discloses in figure (1) an analog-to-digital converter system and method wherein a plurality of sample-and-hold circuits (10) hold and delay an error signal for further processing, a successive approximation technique in the conversion process (See column 2, lines 52-55), and wherein a plurality of reference values (Vref) are compared to an input signal. It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate those well-known techniques taught by Gee et al into the converter of Wiesbauer et al to improve system performance and reliability because this would yield a system that further reduces offset and cross-talk errors (See column 5, lines 57-59). It would have been further obvious to select an optimum multiple of the frequency of the highest signal component for the oversampling.

CONTACT INFORMATION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Lauture, whose telephone number is (571) 272-1805. The examiner can normally be reached Monday thru Friday between 9:30 am and 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Tokar can be reached at (571) 272-1812. The fax number for the organization to which this application is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the group receptionist whose telephone number is (571) 272-1562.
